Readership throughout the North, Central (inc. the Caribbean) and South American continent, reaching several key specially-targeted industry areas: Construction, Cogeneration, Consulting Engineers, Industrial End-Users, IPP's, Service Suppliers and Utilities.

THE MARKET

The USA remains the 2nd largest energy consumer in the world, after China. It ranks seventh in energy consumption per-capita after Canada and a number of other nations. The majority of this energy is derived from fossil fuels, with 25% of its energy coming from petroleum, 22% from coal, and 22% from natural gas. Nuclear power supplies 6.4% and renewable energy supplies 8% - mainly from hydroelectric, biomass, wind power, geothermal and solar energy. Electrical energy consumption continues to increase at a faster rate than domestic energy production and this trend is likely to continue from 2017-2035 and beyond - in the USA, Canada and Mexico reports American Power News.
